

HR Analytics Dashboard Report

1. Executive Summary

The HR Analytics Dashboard is an interactive Excel-based reporting solution developed to analyze workforce performance, recruitment effectiveness, attendance trends, compensation distribution, and employee attrition. The objective of the project was to transform raw HR data into actionable business insights through data cleaning, modeling, KPI development, and dashboard visualization.

The dashboard provides decision-makers with a centralized view of key workforce metrics and enables dynamic filtering through slicers, allowing users to explore trends across departments, locations, salary bands, and employee tenure groups.

2. Project Objectives

The primary objectives of this project were:

- Analyze workforce composition and employee distribution.
 - Measure employee attendance and productivity indicators.
 - Evaluate recruitment efficiency and hiring success rates.
 - Identify attrition patterns and turnover drivers.
 - Develop an interactive dashboard for executive reporting.
 - Demonstrate advanced Excel analytics and dashboard development capabilities.
-

3. Dataset Overview

The project utilizes multiple HR datasets representing different aspects of workforce management.

Employee Master Dataset

Contains employee demographic and organizational information including:

- Employee ID
- Employee Name
- Gender
- Department

- Designation
- Location
- Joining Date
- Salary
- Salary Band

Attendance Dataset

Tracks employee attendance and productivity metrics including:

- Attendance Status
- Work Hours
- Leave Records
- Absence Records

Recruitment Dataset

Captures hiring pipeline information including:

- Candidate ID
- Recruitment Source
- Application Status
- Offer Salary
- Hiring Outcome

Attrition Dataset

Contains employee exit records including:

- Exit Date
- Exit Reason
- Department
- Designation
- Location
- Salary Band
- Attrition Type

The combined dataset represents approximately 500 employee records and associated HR activities.

4. Data Cleaning and Preparation

Before analysis, the datasets underwent a structured data preparation process.

Data Quality Audit

An audit report was created to validate:

- Missing values
- Duplicate records
- Data type consistency
- Format validation
- Business rule verification

Data Transformation

The following transformations were performed:

- Standardization of employee records
- Creation of salary bands
- Generation of attendance flags
- Creation of attrition indicators
- Development of recruitment status flags
- Creation of tenure group classifications
- Data enrichment using VLOOKUP

Helper Columns Created

Several helper columns were developed to support analysis:

- Attendance Flag
- Leave Flag
- Absent Flag
- Productivity Category
- Joined Flag
- Selected Flag
- Interviewed Flag
- Applied Flag
- Attrition Flag
- Attrition Type
- Tenure Group
- Salary Band

These helper columns simplified KPI calculations and dashboard reporting.

5. KPI Framework

A KPI calculation engine was developed to provide dynamic workforce metrics.

The dashboard tracks the following KPIs:

KPI	Description
Total Employees	Total workforce count
Total Attrition	Employees who left the organization
Attrition Rate	Percentage of employees leaving
Total Candidates	Total recruitment applications
Joined Candidates	Successfully hired candidates
Hiring Success Rate	Recruitment conversion rate
Attendance Percentage	Workforce attendance performance
Absenteeism Rate	Employee absence rate
Average Work Hours	Average employee work hours
Average Salary	Average compensation level
Voluntary Attrition %	Employee-initiated exits
Involuntary Attrition %	Organization-initiated exits

6. Dashboard Development

An interactive dashboard was developed using Pivot Tables, Pivot Charts, KPI cards, and slicers.

Workforce Analytics Section

This section provides workforce composition insights through:

- Department Headcount Analysis

- Gender Distribution Analysis
- Salary Band Distribution Analysis

Recruitment Analytics Section

This section evaluates hiring effectiveness through:

- Recruitment Funnel Analysis
- Hiring Source Analysis

Attrition Analytics Section

This section identifies employee turnover patterns through:

- Attrition by Department
- Attrition by Reason
- Attrition by Tenure

Interactive Features

The dashboard includes dynamic slicers for:

- Department
- Location
- Salary Band
- Tenure Group

Users can filter the entire dashboard and instantly update all visuals.

7. Key Insights

The dashboard enables organizations to identify:

Workforce Insights

- Department-wise workforce distribution
- Gender diversity trends
- Compensation segmentation across employee groups

Recruitment Insights

- Most effective recruitment channels

- Hiring conversion efficiency
- Candidate pipeline performance

Attrition Insights

- Departments experiencing higher turnover
- Leading causes of employee exits
- Relationship between tenure and attrition

These insights support workforce planning, retention strategies, and recruitment optimization.

8. Tools and Techniques Used

Microsoft Excel

- Pivot Tables
- Pivot Charts
- Slicers
- Data Validation
- Conditional Formatting
- Dashboard Design

Excel Functions

- VLOOKUP
- IF
- COUNTIF
- SUMIF
- AVERAGE
- Logical Functions

Analytical Techniques

- Workforce Analytics
 - Recruitment Analytics
 - Attrition Analysis
 - KPI Development
 - Data Cleaning
 - Data Modeling
 - Executive Reporting
-

9. Business Impact

The dashboard demonstrates how HR data can be transformed into a decision-support system capable of:

- Improving workforce visibility
- Monitoring recruitment performance
- Identifying retention risks
- Supporting strategic HR planning
- Enabling data-driven decision-making

The solution consolidates multiple HR processes into a single reporting interface, reducing manual reporting effort while improving insight generation.

10. Conclusion

The HR Analytics Dashboard successfully integrates workforce, attendance, recruitment, and attrition data into a centralized analytics solution. Through the use of Excel-based business intelligence techniques, the project delivers meaningful workforce insights while demonstrating practical skills in data cleaning, KPI development, dashboard design, and business analytics.

The project showcases the application of advanced Excel capabilities to solve real-world HR reporting challenges and support organizational decision-making.
